Exam Name Design Associate Exam Price \$200 USD Exam Code JN0-1102 JNCDA Exam Registration PEARSON VUE Number of Questions 65 Sample Questions Juniper JN0-1102 Sample Questions Recommended Training Juniper Networks Design Fundamentals (JNDF)

NEW QUESTION 133

In regards to a Junos Space deployment, which two statements are true?

- * Junos Space can only communicate with devices through its eth0 interface.
- * Junos Space can only communicate with devices through its eth3 interface.
- * Junos Space typically uses the eth0 interface to manage devices through the OOB network.
- * Junos Space typically uses the eth3 interface to manage devices through the in-band network.

NEW QUESTION 134

You are designing a highly resilient network, which two high availability techniques should you use? (Choose two.)

- * Virtual Chassis for EX devices.
- * High bandwidth uplink.
- * Redundant power supplies for network devices.
- * SFP interfaces.

NEW QUESTION 135

What are three ways to secure a customer's network that includes several retail stores? (Choose three.)

- * Isolate sensitive data from devices that access the network using security zones.
- * Ensure that the network meets PCI compliance.
- * Use 802.11g to isolate sensitive data from devices that access the network.
- * Secure cashier access from branch locations by requiring BYOD.
- * Provide guest access on a separate VLAN protected by NAC.

NEW QUESTION 136

Which two statements properly describe Junos operational scripts? (Choose two.)

- * A Junos operational script can only be called from another script.
- * A Junos operational script can be executed manually.
- * A Junos operational script can be executed automatically when a user logs in.
- * A Junos operational script can only execute one operational command per script.

NEW QUESTION 137

What are two requirements that every RFP response should include? (Choose two.)

- * a support plan that includes details about servicing the components once operational
- * a detailed competitor comparison document that indicates the proposed design is the least expensive option
- * a detailed forecast of exception handling after the design has been implemented and is operational
- * an implementation plan that includes a description of how the design will be implemented

NEW QUESTION 138

You are asked to provide a design proposal for an enterprise customer that currently has a three-tier switching infrastructure. The customer wants your design to collapse their Layer 2 infrastructure into two distinct layers.

In this scenario, what are two benefits of moving to the new infrastructure? (Choose two.)

- * The total number of devices is increased.
- * The overall network performance is increased.
- * The number of connections between devices is decreased.
- * The number of protocols used is decreased.

NEW QUESTION 139

Which two statements are true in regards to the Test the Plan step of business continuity planning? (Choose two.)

- * You should test the plan hypothetically on paper.
- * You should test the plan in full-fledged live exercises.
- * You should only test the plan if the risk-assessment shows that more than 10% of the customer's revenue is at risk.
- * You should only test the plan if the risk-assessment shows that more than 20% of the customer's revenue is at risk.

NEW QUESTION 140

What should be the third item in your network design checklist?

- * A validation process for analyzing customer's existing environment.
- * A process for selecting protocols, address schemes, naming conventions, and so forth.
- * A process for understanding the customer's business and technical goals.
- * The steps for designing a network topology.

NEW QUESTION 141

What information is included in an RFP issuance?

- * design requirements
- * product features
- * product positioning
- * COGS pricing

NEW QUESTION 142

A customer wants to implement an automation system that can update BGP routes without commits and can make hundreds of changes per minute.

Which Junos automation tool would accomplish this task?

- * REST Explorer
- * JSNAPy
- * JET
- * event scripts

NEW QUESTION 143

You are designing a network management strategy for a new network.

The requirements for the management of network devices are shown below:

– Administrator passwords must have an expiration date.

– Administrators must be assigned role-specific privileges on each device.

In this scenario, which statement is true?

- * Local authentication must be used on each device.
- * A centralized AAA system must be used for authentication.
- * All devices must be configured with the same privilege levels.
- * Each user must have a unique login account.

NEW QUESTION 144

Which name is used by a service provider to identify the edge device inside the central office facing the customer?

- * LSR
- * PE
- * CE
- * P

NEW QUESTION 145

What are two main data center profile solution templates? (Choose two.)

- * adaptive
- * transitional
- * high-performance computing
- * enterprise IT

NEW QUESTION 146

What are two important considerations with respect to the customer's IT organization which might affect your design? (Choose two.)

- * availability of funding to increase IT staffing
- * staff expertise levels in the technology under consideration
- * reporting hierarchy of the IT support organization
- * availability of the IT telephone contact center

NEW QUESTION 147

What are two advantages of using an out-of-band (OOB) management network?

- * An OOB management network is more reliable than in-band management network.
- * An OOB management network is less reliable than in-band management network.
- * An OOB management network requires higher bandwidth requirements than in-band management network.
- * An OOB management network can function with lower bandwidth requirements than in-band management network.

NEW QUESTION 148

What describes customer business requirements?

- * vision of future growth
- * complexity of the existing network
- * size of the facility
- * functionality of each module within a design

NEW QUESTION 149

What is the maximum number of chassis supported in an SRX Series chassis cluster?

- * ten
- * twenty
- * four
- * two

NEW QUESTION 150

Your customers new network contains network devices from multiple vendors. You have been asked to propose two technologies that will work among all the vendors' networking equipment.

Which two technologies can you recommend for the design? (Choose two.)

- * LLDP
- * PVST+
- * IGRP
- * RSTP

NEW QUESTION 151

What are two aspects of brownfield projects? (Choose two.)

- * New networks with few or no restraints to consider.
- * Old equipment that should be replaced.
- * Legacy applications that are no longer used.
- * Next-generation networks created from the ground up.

NEW QUESTION 152

When discussing network reliability, what does the term 'five nines' mean?

- * The network is up 99.999% of the time.
- * The network is up .99999% of the time.
- * The network is up 9.9999% of the time.
- * The network is up .09999% of the time.
