NO.115 A network technician is installing new software on a Windows-based server in a different geographical location. Which of the following would be BEST for the technician to use to perform this task?
* RDP
* SSH
* FTP
* DNS

NO.116 A network technician is investigating an issue with handheld devices in a warehouse. Devices have not been connecting to the nearest APs, but they have been connecting to an AP on the far side of the warehouse. Which of the following is the MOST likely cause of this issue?
* The nearest APs are configured for 802.11g.
* An incorrect channel assignment is on the nearest APs.
* The power level is too high for the AP on the far side.
* Interference exists around the AP on the far side.

NO.117 According to troubleshooting methodology, which of the following should the technician do NEXT after determining the most likely probable cause of an issue?

* Establish a plan of action to resolve the issue and identify potential effects
* Verify full system functionality and, if applicable, implement preventive measures
* Implement the solution or escalate as necessary
* Test the theory to determine the cause

NO.118 A company that uses VoIP telephones is experiencing intermittent issues with one-way audio and dropped conversations The manufacturer says the system will work if ping times are less than 50ms. The company has recorded the following ping times:

10ms	10ms	10ms	100ms	70ms	5ms	5ms	80ms	100ms	5ms	5ms

Which of the following is MOST likely causing the issue?

* Attenuation
* Latency
* VLAN mismatch
* Jitter

NO.119 Which of the following is the physical security mechanism that would MOST likely be used to enter a secure site?

* A landing page
* An access control vestibule
* A smart locker
* A firewall

NO.120 A network engineer configured new firewalls with the correct configuration to be deployed to each remote branch. Unneeded services were disabled, and all firewall rules were applied successfully. Which of the following should the network engineer perform NEXT to ensure all the firewalls are hardened successfully?

* Ensure an implicit permit rule is enabled
* Configure the log settings on the firewalls to the central syslog server
* Update the firewalls with current firmware and software
* Use the same complex passwords on all firewalls

NO.121 Two remote offices need to be connected securely over an untrustworthy MAN. Each office needs to access network shares at the other site. Which of the following will BEST provide this functionality?

* Client-to-site VPN
* Third-party VPN service
* Site-to-site VPN
* Split-tunnel VPN

NO.122 An IT officer is installing a new WAP. Which of the following must the officer change to conned users securely to the WAP?

* AES encryption
* Channel to the highest frequency within the band
* TKIP encryption protocol
* Dynamic selection of the frequency

NO.123 A network engineer is investigating reports of poor network performance. Upon reviewing a report, the engineer finds that jitter at the office is greater than 10ms on the only WAN connection available. Which of the following would be MOST affected by this statistic?

* A VoIP sales call with a customer

* An in-office video call with a coworker
* Routing table from the ISP
* Firewall CPU processing time

NO.124 A technician is writing documentation regarding a company’s server farm. The technician needs to confirm the server name for all Linux servers. Which of the following commands should the technician run?
* ipconfig
* nslookup
* arp
* route

NO.125 A rogue AP was found plugged in and providing Internet access to employees in the break room. Which of the following would be BEST to use to stop this from happening without physically removing the WAP?
* Password complexity
* Port security
* Wireless client isolation
* Secure SNMP

NO.126 A technician is connecting multiple switches to create a large network for a new office. The switches are unmanaged Layer 2 switches with multiple connections between each pair. The network is experiencing an extreme amount of latency. Which of the following is MOST likely occurring?
* Ethernet collisions
* A DDoS attack
* A broadcast storm
* Routing loops

NO.127 A network administrator wants to analyze attacks directed toward the company’s network. Which of the following must the network administrator implement to assist in this goal?
* A honeypot
* Network segmentation
* Antivirus
* A screened subnet

NO.128 Which of the following can be used to centrally manage credentials for various types of administrative privileges on configured network devices?
* SSO
* TACACS+
* Zero Trust
* Separation of duties
* Multifactor authentication

NO.129 There are two managed legacy switches running that cannot be replaced or upgraded. These switches do not support cryptographic functions, but they are password protected. Which of the following should a network administrator configure to BEST prevent unauthorized access?
* Enable a management access list
* Disable access to unnecessary services.
* Configure a stronger password for access
* Disable access to remote management
* Use an out-of-band access method.

NO.130 A technician is documenting an application that is installed on a server and needs to verify all existing web and database connections to the server. Which of the following tools should the technician use to accomplish this task?

* tracert
* ipconfig
* netstat
* nslookup
