

[Nov-2023 VMware Certification 5V0-35.21 Exam Practice Test Questions Dumps Bundle! [Q20-Q40]

[Nov-2023] VMware Certification 5V0-35.21 Exam Practice Test Questions Dumps Bundle!
2023 Updated 5V0-35.21 PDF for the 5V0-35.21 Tests Free Updated Today!

Q20. A customer is using multiple vRealize Operations (vROps) instances and has one central development vROps instance for creating dashboards. The administrator is tasked to share the newly created dashboards with other vROps instances, and the dashboards must be editable in the other instances.

Which action should the administrator take to accomplish this goal?

- * Generate a custom URL, set the expiration to '“never expire”', and import this URL into the other instance.
- * Use the Embed option to import the HTML code into the other instances.
- * Connect the vROps instances together, and synchronize the dashboards.
- * Export the dashboard from the development instance, and import the dashboard into the other instance.

Q21. An administrator has been notified of a critical alert associated with a VMware vCenter cloud account. The alert states that '“Objects are not receiving data from adapter instance”'. The administrator investigated the problem and resolved the underlying issue. The administrator now needs to stop the alert from triggering again, unless the problem occurs in the future.

Which alert action should the administrator take to meet the criteria?

- * Suspend
- * Cancel Alert
- * Release Ownership
- * Disable the alert in all policies

Q22. For the past 12 hours, a vRealize Operations Cluster has exhibited erratic behavior, and the remote collectors appear to be the cause. The administrator has contacted VMware support, and they have requested all relevant logs.

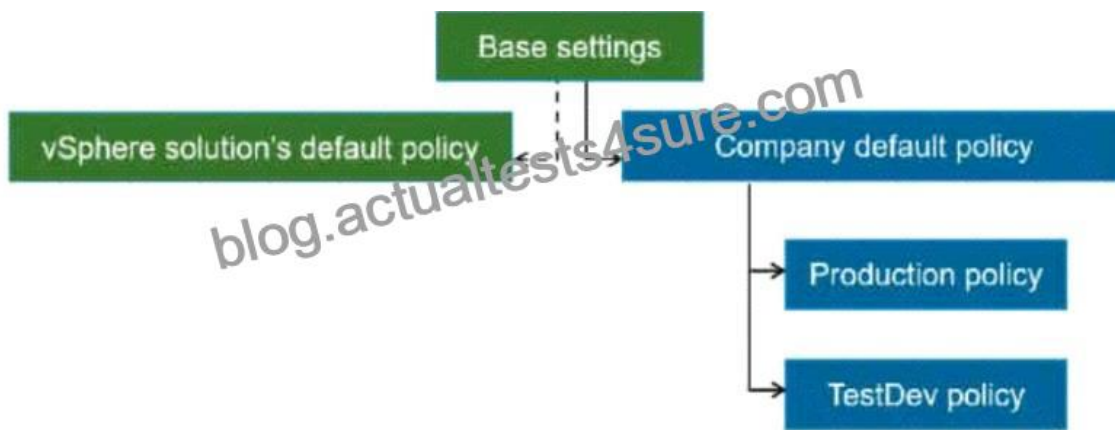

Because of bandwidth constraints, the customer will only be able to send the minimum amount of information to VMware support.

Which support bundle should the customer send that fits these constraints?

- * Full-support bundle from the Primary nodes only
- * Light-support bundle from the Primary nodes only
- * Full-support bundle from all nodes
- * Light-support bundle from all nodes

Q23. An administrator created a default policy for the company. Additionally, separate policies for the production environment and the test and development environment were created, based on the company policy.

Refer to the exhibit:

What will be the impact, if any, of disabling some virtual machine metrics in the Production policy?

- * Objects assigned to the Production and TestDev policies will be affected.
- * All objects will be affected because disabling metrics in a policy will disable them globally.
- * There will be no impact because metrics cannot be disabled in policies.
- * Objects assigned to the Production policy will be affected.

Q24. An administrator discovered a problem in the virtual infrastructure and obtained instructions that would resolve the triggered alert.

Which alert component was used by the administrator?

- * Threshold
- * Symptom
- * Recommendation
- * Reclamation

Q25. A company has just acquired a competitor with a vSphere environment and would like to have the new vSphere environment also monitored by the company's original three-node vRealize Operations cluster. The vRealize Operations Sizing tool determines two additional data node, and a remote collector needs to be added to the vRealize Operations cluster.

The nodes are deployed accordingly, and the administrator now needs to create a trust relationship between the cluster and each of these new nodes.

Which two methods will meet this goal? (Choose two.)

- * Generate passphrases in the administration User Interface of an existing node, and enter them when prompted in each new node.
- * Click the Add New Nodes button on the Cluster Management page in the product User Interface of an existing node.
- * Use any local or directory user with the Administrator role in vRealize Operations when prompted in each new node.
- * Click the Add New Nodes button on the System Status page in the administration User Interface of an existing node.
- * Use the vRealize Operations root user name and password when prompted in each new node.

Q26. An administrator configured a Symptom with a Wait Cycle of 3 and a Cancel Cycle of 2. The default cycle was not changed.

How many minutes will it take for both to be triggered?

- * Wait: 15 minutes, Cancel: 15 minutes
- * Wait: 15 minutes, Cancel: 20 minutes
- * Wait: 15 minutes, Cancel: 10 minutes
- * Wait: 20 minutes, Cancel: 15 minutes

Q27. An administrator defines the role-based access control mechanisms for new vRealize Operations Manager implementation using LDAP authentication method.

Which statement accurately describes these users?

- * Credentials for these accounts are stored in its central Postgres database.
- * They are not allowed to perform any actions in vRealize Operations.
- * They can access vSphere and other objects including third-party objects.
- * The LDAP user password policy is set to expire every 45 days in vRealize Operations.

Q28. A system administrator creates a common catalog to be used by all customers. For availability purposes, the catalog will be consumed by a different VMware Cloud Director instance in a different country.

Which catalog setting enables the catalog to be shared across VMware Cloud Director instances?

- * Published catalog
- * Subscribed catalog
- * Content library catalog
- * Shared catalog

Explanation

<https://www.vmware.com/content/dam/digitalmarketing/vmware/en/pdf/vcat/vmware-architecting-a-vcloud-dire> (67)

Q29. Users have reported several application VMs are performing very slowly. The system administrator was requested to find out the source of the problem on both VMs and/or ESXi hosts level. vRealizeOperations has not been configured with Application Remote Collector.

Which action will help the administrator to quickly identify the underlying problem?

- * Under Inventory, select Manage Agent, then select the VMs, and run Remote Checks on ICMP, HTTP checks.
- * Under Report, use Configuration Report – Virtual Machines to list down possible changes that have occurred.
- * Under Administration, choose Configuration, select Object Relationships, and then identify the VMs and ESXi hosts relationship to generate a correlation of the metric, and finally, isolate the issue.
- * Under Dashboard, choose the out-of-the-box Performance dashboards that displays contention on both VMs and ESXi hosts.

Q30. An administrator is asked to onboard an on-premises vCenter instance into an existing vRealize Operations Cloud instance.

Which two steps are needed to accomplish this goal? (Choose two.)

- * Deploy and configure a Data node.
- * Deploy and configure a cloud proxy.
- * Add a vRealize Operations Cloud account.
- * Deploy and configure a Primary node.
- * Add a vCenter cloud account.

Q31. Which three node configurations are supported during installation, according to vRealize Operations Sizing Guidelines? (Choose three.)

- * Large
- * Small
- * Tiny
- * Very Large
- * Medium
- * No limit

Q32. There is a planned project to move some workloads from a company's vSphere environment, which is running in their data center, to a public cloud. The vSphere environment is being monitored by vRealize Operations.

An administrator has been asked to get a monthly cost estimate for running the workloads in a public cloud.

What are two of the public cloud providers that are supported out-of-the-box in vRealize Operations What-If planning for public cloud costs? (Choose two.)

- * Microsoft Azure
- * Salesforce Cloud
- * Oracle Cloud
- * Alibaba Cloud
- * Google Cloud

Q33. A user has access only to the vRealize Operations Product UI.

Which component will be available when they log in?

- * Dashboards page
- * Software Update page
- * Certificate management
- * System Status page

Q34. While creating a What-If Analysis to compare datacenters, the administrator would like to simulate 25% utilization of the resources.

Which workload option should be included in the scenario?

- * Memory
- * Annual Projected Growth
- * Expected Utilization
- * CPU

Q35. At which frequency are new services discovered when using Service Discovery in vRealize Operations?

- * Every 15 minutes
- * Every 24 hours
- * Every 5 minutes
- * Every hour

Q36. During an upgrade of the vRealize Operations cluster via the Administration UI, the cluster has failed, and the status has changed to offline.

Which remediation strategy should be used to manage this problem and continue the installation process?

- * Manually take the cluster offline, and then select Rollback Installation.
- * Manually bring the cluster online, and then select Rollback Installation.
- * Manually take the cluster offline, and then select Finish Installation.
- * Manually bring the cluster online, and then select Finish Installation.

Q37. An administrator created a pricing card for a new environment. After the pricing card was created and attached, the administrator immediately checked the cost dashboard but only sees zero prices for the VMs in the new environment.

What is the reason for this behavior?

- * The prices are only available for ESXi hosts.
- * A cost-based pricing card was created.
- * The cost calculation has not run yet.
- * The pricing card was not attached to the VM resource.

Q38. Which option in vRealize Operations is able to calculate measurements on a Guest OS?

- * Custom Script
- * HTTP Check
- * UDP Check
- * TCP Check

Q39. Which cloud provider needs to be added as a custom cloud provider when running a What-If Analysis?

- * IBM Cloud
- * Google Cloud
- * Microsoft Azure
- * Oracle Cloud

Q40. A system administrator wants to create a dashboard from widgets.

Which three widgets are available? (Choose three.)

- * Top-N Widget
- * Metric Chart Widget
- * Symptoms Widget
- * Weather Map Widget
- * Report Widget
- * Interaction Widget
