Ultimate Guide to Prepare 1z0-1114-23 Certification Exam for Oracle Cloud in 2024

Oracle 1z0-1114-23 Exam Syllabus Topics:

TopicDetailsTopic 1- Step through a pattern and explore Redwood Pattern Book- Identify Redwood patterns, templates, and components for product designTopic 2- Configure service connections in Visual Builder- Develop Applications Using the Redwood Development ProcessTopic 3- Modify existing pages in Oracle SaaS using Visual Builder- Translate core flows using patterns into a Redwood experienceTopic 4- Explain the building blocks of the design system- Use git, branches, and merge requests to manage code in Visual Builder StudioTopic 5- Create an application using components and page designer- Use the components page to explore and choose the right componentTopic 6- Explain the features and components of Visual Builder Studio- Explain the role of Oracle Visual Builder as a development platform for Cloud AppsTopic 7- Manage builds, jobs, pipelines, and deployments in Visual Builder Studio- Explain the need for a new applications platformTopic 8- Create new Redwood page- app for SaaS data- Translate common scenarios into core flows and user journeysTopic 9- Explain the three types of supported extensions- Create new Redwood apps to mashup SaaS and external data

QUESTION 16

You are planning to use the Dashboard Landing Page template for Key Performance Indicators (KPIs), and a dashboard grid with information visualizations that highlight and explain business performance.

Which is a required property of oj-sp-dashboard-landing-page?

- * Page Title
- * Page Subtitle
- * In Flow Back
- * Primary Action

The Dashboard Landing Page template is a predefined layout that consists of a header with a title and subtitle, a primary action button, an in-flow back button, and a dashboard grid with information visualizations. The title property is required for this template, as it provides a descriptive name for the dashboard. The subtitle property is optional, as it provides additional information or context for the dashboard. The primary action property is also optional, as it defines an action that can be performed on the dashboard, such as creating a new item or filtering the data. The in-flow back property is only applicable when the dashboard is part of a flow or a drill-down navigation, as it allows the user to go back to the previous page. Therefore, option A is the correct answer. Reference: [Dashboard Landing Page Template], [oj-sp-dashboard-landing-page]

QUESTION 17

How many instances of Oracle Visual Builder Studio are provisioned with your Oracle Fusion Cloud Applications Tenancy?

- * Multiple; for each DEV instance in your tenancy
- * None; you need to provision one manually
- * One; mapped to your production Fusion Apps instance
- * One; mapped to a TEST instance of Fusion Apps in your tenancy

When you subscribe to Oracle Fusion Cloud Applications, you get one instance of Oracle Visual Builder Studio provisioned with your Oracle Fusion Cloud Applications Tenancy. This instance is mapped to your production Fusion Apps instance and allows you to create and deploy extensions for your Fusion Apps pages. You can also use this instance to access other instances of Fusion Apps in your tenancy by creating sandboxes for them .

QUESTION 18

You are looking to create a Foldout layout in a page emulating the one in Oracle Fusion Cloud Apps.

How will you do it?

- * Use JavaScript code to animate the various panels on your page.
- * Use a welcome template and add the foldout template inside it.
- * Use the horizontal Foldout page template pattern.

The easiest way to create a Foldout layout in a page emulating the one in Oracle Fusion Cloud Apps is to use the horizontal Foldout page template pattern. This is a predefined pattern that provides a horizontal fold animation for pages with multiple panels of data. You can drag and drop this pattern from the Components palette in Visual Builder Studio and configure it according to your needs.

QUESTION 19

Which is the correct sequence of steps in the Design process?

- * Articulate the vision, understand the problem, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world
- * Understand the statement, articulate the problem, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world
- * Articulate the vision, identify the Redwood Page templates, understand the problem, add the detail and refine the design, specify the design for development, and monitor engagement in the real world

* Understand the problem, articulate the vision, identify the Redwood Page templates to use. add the detail and refine the design, specify the design for development, and monitor engagement in the real world
The correct sequence of steps in the Design process is:

Understand the problem

Articulate the vision

Identify the Redwood Page templates to use

Add the detail and refine the design

Specify the design for development

Monitor engagement in the real world

This is the recommended process for designing with Redwood, as it helps you to create user interfaces that are aligned with your vision, goals, and requirements. It also helps you to leverage the Redwood design system, templates, patterns, and components to ensure consistency, usability, and accessibility.

QUESTION 20

Jim has been working on some changes in a workspace but the project manager wants Tammy to continue the work Jim did.

How can they achieve this?

- * Jim can change ownership of the existing workspace.
- * Jim needs to first commit and push his changes to the central Git branch for Tammy to create a new workspace.
- * Tammy can create a new workspace based on Jim's workspace.

The best way to achieve this is to have Tammy create a new workspace based on Jim's workspace. A workspace is a private copy of the code that you can work on without affecting other developers. You can create a new workspace from an existing one by selecting the option 'Create Workspace From' in Visual Builder Studio. This will copy all the changes from the source workspace to the new one, allowing Tammy to continue the work Jim did.

QUESTION 21

What is the minimum and maximum number of steps that can be configured on a Guided process?

- * Minimum 2 and maximum 25
- * Minimum 1 and maximum 10
- * Minimum 1 and maximum 50
- * Minimum 4 and maximum 10

A Guided process is a component that guides users through a series of steps to complete a task or a workflow. A Guided process can have a minimum of one step and a maximum of 10 steps. Each step can have a label, an icon, an optional description, and an optional action. A Guided process can also have optional buttons for navigation or completion. Therefore, option B is the correct answer. Reference: [Guided Process Component], [oj-sp-guided-process]

QUESTION 22

Which two tools allow UI/UX Designers to reuse Redwood's shared libraries and templates for projects and products? (Choose two.)

- * Figma

- * UXPin
- * Adobe XD
- * Marvel
- * PowerPoint RDS

The two tools that allow UI/UX Designers to reuse Redwood's shared libraries and templates for projects and products are Figma and Adobe XD. These are popular design tools that support importing and exporting UI components, layouts, and styles. Redwood provides a toolkit for Figma and a plugin for Adobe XD that enable designers to access and use Redwood's shared libraries and templates in their projects.

QUESTION 23

You need to create a customer-facing portal to list products from Fusion Apps.

What can you use to achieve this?

- * A stand-alone Visual Builder instance hosting the app
- * An Oracle APEX app that is installed in the Fusion Cloud Apps database
- * An AppJJI extension that has a vanity URL setup

The best option to create a customer-facing portal to list products from Fusion Apps is to use a stand-alone Visual Builder instance hosting the app. This way, you can leverage the Redwood design system and components to create a consistent and engaging user interface for your portal. You can also use Visual Builder's REST capabilities to access and manipulate data from Fusion Apps services.

QUESTION 24

The Redwood template your page is based on has a primary action button.

How do you control what it does?

- * Create an action chain mapped to the template's primary action event, at the template level.
- * You cannot. The functionality is determined by the original template.
- * Remove the existing button from the template and add your own.
- * Create an onAction action chain on that button.

The primary action button is a UI component that represents the main action that the user can perform on a page. It is usually located at the top right corner of the page and has a prominent color and style. The primary action button is defined by the Redwood template that your page is based on, and its functionality is determined by an action chain mapped to the template's primary action event at the template level. You can create or modify this action chain to control what the primary action button does on your page .

QUESTION 25

In which three cases would you need a Visual Builder service instance to deploy your app to? (Choose three.)

- * When the app needs to be accessed by users who do not have Fusion Apps access
- * For gaining access to an external database through a REST service requiring basic auth
- * When there is an application that is accessible from a vanity URL (Custom domain)
- * For gaining access to Oracle Fusion Apps REST services
- * For enabling the app to be integrated into the Fusion Cloud Apps menu

You would need a Visual Builder service instance to deploy your app to in three cases:

When the app needs to be accessed by users who do not have Fusion Apps access: If you want your app to be available to users who are not authorized to access Fusion Cloud Apps, you need to deploy it to a stand-alone VB instance that has its own user management and security policies.

When there is an application that is accessible from a vanity URL (Custom domain): If you want your app to have a custom domain name that is different from the default VB instance URL, you need to deploy it to a stand-alone VB instance that supports custom domain configuration.

When gaining access to Oracle Fusion Apps REST services: If you want your app to access the REST services provided by Fusion Cloud Apps, such as querying or updating data, you need to deploy it to a VB instance that is connected to the FA instance and has the appropriate security roles and permissions. Therefore, options A, C, and D are the correct answers. Reference: [Deploying Visual Builder Apps], [Accessing Fusion Applications REST Services]

QUESTION 26

Redwood uses dynamic padding to provide users with the most comfortable experience regardless of the device and viewport size.

Which are the two correct statements about dynamic padding? (Choose two.)

- * In small breakpoints the margins disappear because the container spans the viewport's width
- * Padding is the space between margins and the left and right edges of the containers.
- * In Edge-to-Edge layout, the margins disappear because the container spans the viewport's width.
- * There is a space between the container and the top and bottom edges of the viewport.

The two correct statements about dynamic padding are:

In small breakpoints the margins disappear because the container spans the viewport's width.

In Edge-to-Edge layout, the margins disappear because the container spans the viewport's width.

Dynamic padding is a feature of Redwood that adjusts the padding and margins of containers according to the viewport size and layout type. This ensures that there is enough space around the content for comfortable reading and interaction. In small breakpoints, such as mobile devices, there is no need for margins (the space between containers) because there is only one container per row. In Edge-to-Edge layout, there is no need for padding (the space between containers and viewport edges) because the container fills up the entire width of the viewport.

QUESTION 27

You are asked to refer to the Redwood Pattern Book before developing the Redwood application.

Which three pieces of information are included in the Pattern Book? (Choose three.)

- * Template introduction
- * Pictorial representation of data
- * User manual for Use Cases
- * Specific page functionality
- * Composites and components

The Pattern Book is a collection of templates and patterns that provide guidance and best practices for developing Redwood applications. It includes a template introduction that explains the purpose and usage of each template, a pictorial representation of data that shows how to visualize data in different scenarios, and composites and components that describe the common elements and interactions of Redwood UIs .

QUESTION 28

What are the two merits of modifying an Oracle Fusion Apps page in Visual Builder Studio? (Choose two.)

- * You can remove any UI component from the page.

- * You can edit any UI component anywhere on the page.
- * You can only edit areas that were set for configurations by Oracle.
- * You can conditionally hide/show fields in dynamic tables and forms.

Modifying an Oracle Fusion Apps page in Visual Builder Studio has some advantages over modifying it directly in Fusion Apps. One of them is that you can only edit areas that were set for configurations by Oracle, which ensures that you do not break any functionality or violate any design principles of the original page. Another one is that you can conditionally hide/show fields in dynamic tables and forms, which allows you to customize the UI based on user roles or preferences .
