[Feb 14, 2024] Latest Questions P_C4H340_24 Guide to Prepare Free Practice Tests [Q20-Q41]

[Feb 14, 2024 Latest Questions P_C4H340_24 Guide to Prepare Free Practice Tests Reliable P_C4H340_24 Dumps Questions Available as Web-Based Practice Test Engine

SAP P-C4H340-24 exam is an essential certification for developers who are looking to validate their skills in SAP Commerce Cloud development. By passing P_C4H340_24 exam, candidates demonstrate their proficiency in developing and customizing SAP Commerce Cloud solutions using the latest technologies. With the increasing demand for SAP Commerce Cloud developers, obtaining this certification can help developers to advance their careers and increase their earning potential.

Q20. To install and configure the Solr server in cloud mode, which sequence of steps should you use?

- * Disable the autostart for the default instance. Enable the autostart for the cloud instance. Set the cloud instance mode to true.
- * Disable the autostart for the cloud instance. Enable the autostart for the default instance. Set the default instance mode to cloud.
- * Disable the autostart for the default instance. Enable the autostart for the cloud instance. Set the cloud instance mode to cloud.
- * Disable the autostart for the cloud instance. Enable the autostart for the default instance. Set the cloud instance mode to true.

Q21. In personalization (based on SmartEdit), you want to configure when the experience calculation is triggered for registered

customers without requiring any customization. What are the available options? Note: There are 3 correct answer to this question.

- * Trigger the experience calculation for certain URL patterns.
- * Trigger the experience calculation after a defined number of requests.
- * Trigger the experience calculation when the customer logs in.
- * Trigger the experience calculation when the customer adds a product to the cart.
- * Trigger the experience calculation when the customer is promoted to a reward-level status.

Q22. What can you do in the Builds workspace in Cloud Portal? Note: There are 2 correct answer to this question.

- * Delete a build that is no longer needed
- * View the history of the past deployments of a selected build
- * Deploy a successful build to a certain environment
- * Rebuild a successful build to do a performance test

Q23. Your solution has been live for a significant period of time. Now you need to update project data across multiple environments, but this update should only be executed once. What is the recommended approach for updating the project data?

- * Create a class that extends AbstractPatchesSystemSetup and configure any data patches, which can run an import of your ImpEx files during an update.
- * Extract a SQL script of all the changes in a single environment, which a OBA can then run directly against the database for all remaining environments.
- * Create a class that extends AbstractSystemSetup and use the @SystemSetup annotation with TYPE.PROJECT, which can run an import of your ImpEx files during an update.
- * With each deployment, manually import the ImpEx files via the hybris Admin Console or via the ant importimpex target.

Q24. You are asked to define a new business process. What steps do you perform? Note: There are 3 correct answer to this question.

- * Define the process in BPMN format.
- * Define the actions as Spring beans.
- * Create actions in Java code.
- * Define actions as new item types.
- * Define the process in XML format.

Q25. What must you always specify when you are creating a new Adaptive Search Profile? Note: There are 3 correct answer to this question.

- * Category
- * Index configuration
- * Index type
- * User
- * Catalog version

Q26. Which of the following relations are defined in the data model for personalization (based on SmartEdit)? Note: There are 2 correct answer to this question.

- * A one-to-many relation between CxExpressionTrigger and CxSegment
- * A one-to-many relation between CxCustomization and CxVariation.
- * A many-to-many relation between CxVariation and CxAbstractAction.
- * A many-to-many relation between CxSegmentTrigger and CxSegment.

Q27. When using Monitoring Support in the Integration API Module, what should you pay attention to? Note: There are 2 correct answer to this question.

- * You can monitor the inbound integration requests using the Meta API.
- * In Outbound monitoring, if the source of the OutboundRequest is not from outbound sync or webhooks, it is set as UNKNOWN.
- * If you want to disable the monitoring, you need to change the dedicated properties in local.properties and restart the commerce

cloud server.

* If the number of batches in a bulk request exceeds the limit allowed, then the system records one Inbound Request with the payload.

Q28. Assuming that property `impex.legacy.scripting` is set to `false` and `Enable code execution` is checked, what are the results of the following ImpEx script? `INSERT_UPDATE Title;code[unique=true] #0/ogroovy0/o beforeEach: line.clear(); ;foo; ;bar; ;baz;`

- * No entries will be updated or inserted.
- * Only the Title with code that equals `baz` will be updated or inserted.
- * All data rows will be cleared of unnecessary space.
- * All `foo`, `bar`, and `baz` codes will be updated or inserted.

Q29. You are creating a new ancillary catalog for your site. Which of the following principles should you consider? Note: There are 2 correct answer to this question.

- * Restrict the read and write access of this catalog in its permission tab in Backoffice.
- * A catalog version has a hierarchy of categories, containing products.
- * A catalog must have at least 2 versions: staged and online.
- * You can create an unlimited number of catalog versions under this catalog.

Q30. You need to add a new Cockpit to the Backoffice to implement new features for a business user role. Which tasks are required? Note: There are 2 correct answer to this question.

- * Create or reuse an add-on, and install it into the storefront.
- * Create a new multiplexer widget for the borderlayout widget.
- * Create or reuse a Backoffice extension with the proper meta information.
- * Add a new layout widget in `config.xml`.

Q31. You are creating an extension with a web module. What do you need to ensure? Note: There are 2 correct answer to this question.

- * An extension with a web module can only be extended with an add-on.
- * An extension with a web module must have a web folder.
- * An extension with a web module must always have a core module.
- * The web root must be set in the web module directive in the `extensioninfo.xml` file.

Q32. How can you start a business process in SAP Commerce Cloud? Note: There are 2 correct answer to this question.

- * Use the hot folder functionality by creating a file in the configured hot file.
- * Use the Backoffice Business Process section.
- * Invoke the appropriate method of the `BusinessProcessService` from a script in the hybris Administration Console (hAC) scripting console.
- * Invoke the appropriate method of the `BusinessProcessService` from Java code.

Q33. You are running a transaction that creates an item and updates it twice. If the transaction is committed successfully, how many `AfterSaveEvent` items will the `ServiceLayer` create?

- * 1
- * 0
- * 3
- * 2

Q34. What can a `*-backoffice-widgets.xml` contain in the Backoffice framework? Note: There are 2 correct answer to this question.

- * Spring beans of backoffice web context
- * Context configuration object definition

- * Virtual socket definition
- * Widget connection

Q35. How does Spartacus compare to the SAP Commerce Cloud Accelerators? Note: There are 2 correct answer to this question.

- * They have the same feature parity, but Spartacus is more upgradable.
- * Accelerators are JSP-based while Spartacus is JavaScript-based.
- * They are both using OCC API to connect to the commerce platform.
- * They are both extensible according to project requirement.

Q36. What can you do within the integration UI Tool in Backoffice? Note: There are 2 correct answer to this question.

- * Create a search restriction to secure an integration object for only a certain integration user group.
- * Set up access rights for integration objects.
- * Force-delete an integration object even if it is associated with an InboundChannelConfiguration (ICC).
- * Export the configuration types so that they can be imported into a target system.

Q37. You are implementing a new custom promotion action that changes the delivery mode of an order. What steps are required to make sure that the effects of this action are reverted as soon as the condition that triggered it is NO longer fulfilled? Note: There are 2 correct answer to this question.

- * Implement the undo method in your custom rule action strategy
- * Define a new session attribute to store the original delivery mode
- * Implement your custom action item so that it can store the original delivery mode
- * Create a promotion that uses the inverse action if the condition is NOT fulfilled

Q38. How does Spartacus compare to the SAP Commerce Cloud Accelerators? Note: There are 2 correct answer to this question.

- * They have the same feature parity, but Spartacus is more upgradable.
- * Accelerators are JSP-based while Spartacus is JavaScript-based.
- * They are both using OCC API to connect to the commerce platform.
- * They are both extensible according to project requirement.

Q39. What do you set up to create visibility rules for specific product items for a user group?

- * A type access right on the Product type for the user group
- * A search restriction on the UserGroup type
- * A search restriction on the Product type for the user group
- * A type access right on the UserGroup type

Q40. When are consignments created for an order in the default order management implementation?

- * When an administrator approves the order
- * After the order is placed, but before it is sourced successfully
- * When the user adds items to the cart
- * After the order is placed and after it has been sourced successfully

Q41. Which of the following are best practices for adding a new parameter to an existing method of CommerceCartService? Note: There are 2 correct answer to this question.

- * Overload the existing method of CommerceCartService by adding the new parameter.
- * Add a new property to CommerceCartParameter in a beans.xml file.
- * Extend the default strategy called by the method to handle the new parameter.
- * Extend the default implementation of the method to handle the new parameter.
