

## [Dec 01, 2024 5V0-92.22 certification guide Q&A from Training Expert Actualtests4sure [Q25-Q46]

### [Dec 01, 2024] 5V0-92.22 certification guide Q&A from Training Expert Actualtests4sure [Q25-Q46]

[Dec 01, 2024] 5V0-92.22 certification guide Q&A from Training Expert Actualtests4sure  
5V0-92.22 Certification Overview Latest 5V0-92.22 PDF Dumps

**Q25.** What is the purpose of using `WHERE` clauses in operational SQL queries?

- \* To specify the criteria for data selection
- \* To rename columns in the output
- \* To link multiple tables
- \* To increase the execution time

**Q26.** What is a key component of the architecture of VMware Carbon Black Cloud Audit and Remediation?

- \* A manual data entry process
- \* A physical hardware sensor
- \* A cloud-based analytics engine
- \* A decentralized database system

**Q27.** Which task is part of routine IT administration?

- \* Monitoring system performance

- \* Organizing office parties
- \* Updating software
- \* Managing user accounts

**Q28.** What is a best practice when running SQL queries for administrative tasks?

- \* Executing multiple queries simultaneously
- \* Regularly reviewing and updating queries
- \* Using the most complex query possible
- \* Ensuring queries are aligned with operational objectives

**Q29.** What is important when designing a data center?

- \* Color scheme of the walls
- \* Energy efficiency
- \* Physical security
- \* Cooling systems

**Q30.** What is a necessary step in the installation of a network router?

- \* Painting the router
- \* Configuring network settings
- \* Installing a gaming software
- \* Setting up security protocols

**Q31.** Which product is typically used for enterprise resource planning?

- \* Photoshop
- \* SAP
- \* AutoCAD
- \* Microsoft Excel

**Q32.** How does the use of indexes in conjunction with `WHERE` clauses enhance performance?

- \* By increasing data redundancy
- \* Through faster data retrieval
- \* By expanding the search criteria
- \* Reducing the amount of data needing to be scanned

**Q33.** How should threats be remediated according to best practices in VMware Carbon Black?

- \* By ignoring low-severity alerts
- \* Through automated response actions
- \* Manually, after thorough investigation
- \* By rebooting the affected systems

**Q34.** When creating a complex query in a console, what practice are recommended?

- \* Writing the entire query in a single line
- \* Breaking the query into sub-queries
- \* Testing the query in stages
- \* Avoiding the use of comments

**Q35.** How can network performance be enhanced?

- \* By reducing the number of connected devices
- \* Upgrading network hardware
- \* Implementing bandwidth management

- \* Using older communication protocols

**Q36.** What is a common method to prevent SQL injection attacks when creating queries?

- \* Using simple, straightforward queries
- \* Employing parameterized queries
- \* Restricting query length
- \* Avoiding the use of the WHERE clause

**Q37.** In VMware Carbon Black, which feature allows for proactive threat hunting?

- \* Live response scripting
- \* Scheduled query execution
- \* Manual log review
- \* Automatic software update

**Q38.** What is an advantage of scheduling SQL queries for operational monitoring?

- \* Reduces the need for manual execution
- \* Enhances the graphical interface
- \* Automatically updates the SQL version
- \* Ensures consistent data collection

**Q39.** What kind of data flow is primarily used in VMware Carbon Black Cloud Audit and Remediation?

- \* Sensor-to-cloud data upload
- \* Bi-directional communication between endpoints and cloud
- \* Cloud-to-sensor data download
- \* Local endpoint data processing

**Q40.** Which SQL statement is used to retrieve specific columns `name` and `email` from a `users` table?

- \* `SELECT name, email FROM users;`
- \* `SELECT * FROM users;`
- \* `UPDATE users SET email = 'example@email.com';`
- \* `INSERT INTO users (name, email) VALUES ('John', 'john@email.com');`

**Q41.** What is crucial in the planning phase of an IT project?

- \* Choosing a project name
- \* Risk assessment
- \* Selecting office furniture
- \* Budget allocation

**Q42.** What is a common reason for a database query to return an error?

- \* The query is too long
- \* Incompatible data types in comparisons
- \* The query is executed on a Tuesday
- \* Lack of a `where` clause

**Q43.** Which method is effective for optimizing server performance?

- \* Regular data backup
- \* Defragmenting hard drives
- \* Updating the server hardware
- \* Installing decorative lights

**Q44.** How can you ensure that a SQL query is well-optimized?

- \* By running it during off-peak hours
- \* Using indices on columns involved in the query
- \* Limiting the query to retrieve only 10 rows at a time
- \* Analyzing the query execution plan

**Q45.** When running a query against multiple operating systems, what consideration is important?

- \* Syntax compatibility across operating systems
- \* The color scheme of the operating system
- \* The time zone of the server
- \* The brand of the operating system

**Q46.** In performance tuning, how does the optimization of `WHERE` clauses affect query execution?

- \* Increases the amount of data scanned
- \* Reduces the execution time
- \* Impacts the color scheme of the results
- \* Decreases server load
